FOR IMMEDIATE RELEASE

WILLOW LABORATORIES INTRODUCES BARBITURATES AND BENZODIAZEPINES TO ITS HAIR TESTING OPTIONS

(Willow Laboratories, May 19, 2010) Lynn, MA – Willow Laboratories is proud to announce the introduction of benzodiazepines and barbiturates analysis to our hair testing capabilities. Our Laboratory Technologists have been working for the last few months to effectively create and validate the methods to be able to accurately detect these additional drugs through hair. Willow is proud to offer these services as we continue to expand our offerings beyond the standard 5 drug hair test, which includes: Amphetamines, Cocaine, Opiates, PCP and THC. With the addition of barbiturates and benzodiazepines testing, Willow now is capable of detecting 9 drug classes through hair that include the aforementioned five drugs, plus: Barbiturates, Benzodiazepines, Ecstasy, and Methamphetamine.

In response to the constant change in the landscape of drug abuse, and the specific drugs being abused; Willow has worked closely with its clients to develop hair testing options that meet their needs. Hair testing is a viable option for those that face ever-increasing difficulties associated with urine collection and are looking for specific advantages; which include, but are not limited to: a wider range of detection time (90 days in most circumstances), a less-invasive collection process and the ability to decrease the likelihood of collecting a tampered specimen. Drug testing in hair can accurately measure the parent and/or metabolites of drugs that are found in the specimen. Using hair as a testing matrix has become a widely accepted form of drug testing and is one that Willow will continue to focus its efforts through expanded research and development.

Headquartered in Lynn, Massachusetts, Willow Laboratories offers specialized laboratory based drug and alcohol testing services, including GC/MS and LC/MS/MS confirmations. In addition to our urine and hair drug screening, we provide alternative testing through saliva. Willow maintains a staff consisting of: pharmacologists, board certified toxicologists, physicians, and certified medical technologists to assist with immediate result interpretation or to answer any other questions a client may have. Clients can access their results through our secure website at www.willowlabs.com or have results sent electronically to patients medical records.

If you would like more information about these services, please call Willow Laboratories at (800) 599-8843 or e-mail marketing@willowlabs.com
